

CUSTOMER FOCUS INNOVATION AND QUALITY

Woodland Metal Spinning is one of the most advanced metal forming facilities in Australia. We produce a wide range of metal products from precision aeronautical components and machinery parts to contemporary cookware, furniture and lightshades.

Located in southwest Sydney, we are equipped with modern CNC machinery, in house toolmaking capability and skilled personnel. Plus, we offer customer service that is second to none.

What we do:

- Metal spinning
- Laser cutting
- Metal fabrication
- Metal pressing
- Metal machining

“

We work with Woodland Metal Spinning for the following reasons: They produce quality products, are excellent to deal with and have good lead times.

”

Metal Spinning Client

The Leifeld SC310 lathe is the centrepiece of our spinning operation. The state-of-the-art CNC machine can perform multiple operations simultaneously so we can deliver the fastest rapid changeover system in Australia.

CNC metal spinning saves time and money in set up costs and produces a more consistent product than manual spinning.

Maximum Material Capability
